

4. CONFIGURATION (COMNET) SCREEN

The controls at the bottom of this screen allow you to set your hardware configuration and whether you want the music and sound effects on or off. The first time the game is run, 5th Fleet will automatically detect your hardware and set itself accordingly. The controls here over-ride the initial configurations.

The controls on the left are used for configuring the play by email settings. The system is now outdated, so ignore these controls and use the PBEM method described later in this manual.

The radar screen is for decorative purposes only.

To return to the CIC Screen click the QUIT STATION button.
